

Additional Features

The YoZone is chilled by the 1/2 plus hp compressor and has a heated triple-pane glass front to reduce condensation. The door system also provides more insulation in critical areas. This machine provides the operator flexibility and the option to have a machine that can furnish a greater selection of products.

Sensit II System guarantees product delivery or gives a refund

EnergySensit is a programmable feature in certain AMS vendors which collects and stores data of past performance to determine when and how to save money. By memorizing when the vendor is used and when it isn't, EnergySensit reduces the use of energy, and that reduces operator cost!
